ů

DETAILED ACTION

1. The following guidelines illustrate the preferred layout and content for patent applications. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

The following order or arrangement is preferred in framing the specification and, except for the title of the invention, each of the lettered items should be preceded by the headings indicated below.

- (a) Title of the Invention.
- (b) Cross-References to Related Applications (if any).
- (c) Statement as to rights to inventions made under Federally-sponsored research and development (if any).
- (d) Background of the invention.
 - 1. Field of the Invention.
 - 2. Description of the Related Art including information disclosed under 37 CFR 1.97-1.99.
- (e) Summary of the Invention.
- (f) Brief Description of the Drawing.
- (g) Description of the Preferred Embodiment(s).
- (h) Claim(s).
- (I) Abstract of the Disclosure.

2. Content of Specification

- (a) <u>Title of the Invention</u>: The title of the invention should be placed at the top of the first page of the specification. It should be brief but technically accurate and descriptive, preferably from two to seven words. See 37 CFR 1.72(a).
- (b) <u>Cross-References to Related Applications</u>: See 37 CFR 1.78 and MPEP § 201.11.
- (c) Statement as to rights to inventions made under Federally sponsored research and development (if any): See MPEP § 310.
- (d) <u>Background of the Invention</u>: The specification should set forth the Background of the Invention in two parts:

Serial Number: 08/732,308 Page 3

Art Unit: 3207

(1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of the subject matter of the claimed invention. This item may also be titled "Technical Field".

- (2) <u>Description of the Related Art</u>: A description of the related art known to the applicant and including, if applicable, references to specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."
- (e) Summary of the Invention: A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.
- (f) <u>Brief Description of the Drawing(s)</u>: A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.
- embodiment(s) of the Preferred Embodiment(s): A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. This item may also be titled "Best Mode for Carrying Out the Invention." Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.

Page 4

Serial Number: 08/732,308

Art Unit: 3207

(h) <u>Claim(s)</u>: A claim may be typed with the various elements subdivided in paragraph form. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75.

- (I) <u>Abstract of the Disclosure</u>: A brief narrative of the disclosure as a whole in a single paragraph of 250 words or less on a separate page following the claims.
- 3. Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims must be rewritten to conform to U.S. practice. In particular, improper alternative limitations must be rewritten or deleted, and the phrase "may be" must be eliminated. The claims must include positive recitations of the required features--not recitations of what "may be" included. In addition, the word "seemless" in claim 1 must be changed to "seamless," and an antecedent must be provided for "the fabric ends," also in claim 1.

- 4. Claims 1-25 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112 set forth in this Office action.
- 5. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Austria on May 4, 1994. It is noted, however, that applicant has not filed a certified copy of the application as required by 35 U.S.C. 119(b).
- 6. The cited patents have been cited to show bags made from oriented tapes and bags having valves in their end walls.
- 7. In order to reduce pendency and avoid potential delays, Group 3200 is encouraging faxing of responses to Office Actions directly into the Group at (703)305-3579 or 3580. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via
